

CMPT Paper Challenge, PC202

Lab Name: _____ Lab No. _____

Description:

Your good friend had a small, but joyous get-together on Saturday night, recognizing and respecting hygiene and physical distancing practices. You had a few alcoholic drinks, but not to excess. On Sunday when you awoke, you did not feel rested, and had a headache, and maybe some nausea, so you stayed home, took some Ibuprofen and went back to bed. Maybe you drank more than you thought! When you awoke for work on Monday, you felt somewhat better. You are still tired, the headache has not gone away, and you now have a slight sore throat. You are pretty sure you are coming down with a cold, so you call work and inform your laboratory supervisor. You are told by your supervisor that there is a problem because four of your laboratory colleagues have called in sick, and your supervisor wonders if you would consider coming in despite your cold.

Please choose the option below that best describes how you would proceed:

- A.** Put on a mask and go to work.
- B.** Tell your supervisor you are going to stay at home.
- C.** Tell your supervisor that you are going to get a test, and if it is negative you will be in this afternoon or tomorrow.
- D.** Stay home. Go to your doctor's office (or walk-in clinic) and get their opinion about what to do next.
- E.** Go to the nearby Emergency Department.

Please submit your report via the on-line data entry program, www.cmpt.ca (Please see enclosed instructions)
